National Outbreak Reporting System

Foodborne Disease Transmission, Person-to-Person Disease Transmission, Animal Contact, Environmental Contamination, Unknown Transmission Mode

This form is used to report investigations of foodborne disease outbreaks and enteric disease outbreaks transmitted by contact with persons, animals, or environmental sources, or by an unknown mode of transmission. This form has 5 sections, General, Etiology, Settings, Animal Contact, and Food, as indicated by tabs at the top of each page. Complete the General and Etiology tabs for all modes of transmission and complete additional sections as indicated by the mode of transmission. Please complete as much as possible of all applicable sections.

CDC USE ONLY

General Section – complete for all modes of transmission except water

Primary Mode of Transmission (Check one)

- ☒ Food (complete General, Etiology, and Food tabs)
☐ Water (complete CDC 52.12)
☐ Animal contact (complete General, Etiology, and Animal Contact tabs)
☐ Person-to-person (complete General, Etiology, and Settings tabs)
☐ Environmental contamination other than food/water (complete General, Etiology, and Settings tabs)
☐ Other/Unknown (complete General, Etiology, and Settings tabs)

Investigation Methods (Check all that apply)

- ☒ Interviews only of ill persons
☐ Case-control study
☐ Cohort study
☐ Food preparation review
☐ Water system assessment: Drinking water
☐ Water system assessment: Nonpotable water
☐ Treated or untreated recreational water venue assessment
☐ Investigation at factory/production/treatment plant
☐ Investigation at original source (e.g., farm, water source, etc.)
☐ Food product or bottled water traceback
☐ Environment/food/water sample testing
☐ Other

Dates (mm/dd/yyyy)

Date first case became ill (required) 06/22/2018 Date last case became ill 07/31/2018
 Date of initial exposure Date of last exposure
 Date of report to CDC (other than this form) 08/31/2018
 Date of notification to State/Territory or Local/Tribal Health Authorities 08/31/2018

Geographic Location (Case Counts can be found in the appendix)

Exposure state: Multistate

- ☒ Exposure occurred in multiple states
☐ Exposure occurred in a single state, but cases resided in another state or multiple states
 Other states: California, Kentucky, Pennsylvania, Tennessee, Washington, Wisconsin
 (For multistate exposure or multistate residency outbreaks, enter the case count for each state)

Exposure county:

- ☐ Exposure occurred in multiple counties in exposure state
☐ Exposure occurred in a single county, but cases resided in another county or multiple counties
 Other counties:

City/Town/Place of exposure:
 (Do not include proprietary or private facility names)

Clinical and Environmental Testing

1. Were any samples collected and tested? ☒ Yes ☐ No ☐ Unknown (If no or unknown, skip to Q6)

2. How many samples of each type were tested?

Type of sample	Tested? (yes/no/unknown)	Number of samples tested
Human specimen	Yes	12
Animal specimen	No	
Food	No	
Water	No	
Other environmental (specify in general remarks)	No	

3. What were they tested for? (check all that apply)

- ☒ Bacteria (or bacterial toxins)

4. Test types (select all test types used for clinical specimens)

- ☐ Chemical testing
☐ Culture
☐ DNA or RNA Amplification/Detection (e.g., PCR, RT-PCR)
☐ Microscopy (e.g., Fluorescent, EM)
☐ Serological/immunological test (e.g., EIA, ELISA)
☐ Tissue culture infectivity assay
☐ Other (specify in general remarks)
☒ Unknown

5. Was antimicrobial susceptibility testing (AST) performed? ☐ Yes ☐ No ☒ Unknown

If yes, where was AST performed? ☐ Clinical lab ☐ Public health lab ☐ CDC-NARMS ☐ Other ☐ Unknown

If yes, were any antimicrobial resistant isolates associated with the outbreak? ☐ Yes ☐ No ☐ Unknown

6. Is there at least one confirmed* or suspected outbreak etiology(s)?

- ☐ Yes ☒ No (unknown etiology) If no, skip to next section

CDC Remarks

This cluster included 12 ill persons from a total of 6 states. Ill people ranged in age from 1 to 71 years (median: 27 years); 8 of 12 (67%) of ill people were male. Of 10 people for whom information is available, 2 hospitalizations and no deaths were reported. Although this outbreak appears to be foodborne, the vehicle remains unknown. This outbreak will be reported to NORS with report ID 2018-0109.

This cluster was initially identified when several employees of a company in Seattle, WA developed diarrheal illness and were subsequently found to have infection with STEC. Four ill people within this group had culture-confirmed *E. coli* O26. Although isolates from these 4 individuals had different PFGE enzyme pattern combinations, all were found to be highly related by WGS analysis (0-3 alleles). Public Health-Seattle and King County investigated the cafeteria and dining facilities at the headquarters, and also performed a case-control study, but ultimately did not identify a vehicle for the illnesses. Public health officials noted that most of the ill people ate at the dining facilities daily, making exposure periods and potential vehicles more difficult to discern.

The four PFGE enzyme patterns of the Seattle isolates were unique, and queries of NCBI and PulseNet identified additional isolates that either were indistinguishable by one or both enzyme patterns or were highly related to the Seattle isolates. A total of 8 additional isolates were identified from WA (2), CA (1), KY (1), PA (1), TN (2), and WI (1). Among the total of 12 ill people, isolation dates ranged from 6/28/2018–8/17/2018. NHGQs were deployed, and of 5 received, the following common exposures were recorded: precut chicken parts (3/5), steak (3/5), ground beef at home and away from home (3/5), blueberries (3/5), raw tuna (2/4), eggs at home (3/5), cheese (3/5), fresh tomatoes of multiple varieties (4/4), tomatoes on sandwich (3/4), guacamole/avocados (3/4), cilantro (3/5), carrots (4/5). Interestingly, four ill people (including a mother and child) reported travel to HI during their incubation periods, although no commonalities within HI were reported. Based upon limited information available, it also does not appear that these individuals ate at common restaurants or flew on a common airline.
