CDC Remarks

This investigation for the Salmonella Montevideo 1908MLJIX-1 cluster is being closed. This cluster consisted of 32 cases from 13 states: [AL, FL, IL (2), KS, MA (4), MD, MI, MN (11), MO (2), NJ, NY (3), OH, WI (3)]. Reported and estimated illness onset dates ranged from March 1 – October 3, 2019. Case-patients were 52% female and ages ranged from 6 to 88 years, with a median age of 52 years. Among 31 case-patients with information, there were 5 (16%) reported hospitalization and no reported deaths.

Case-patients reported eating at several fast food restaurants, including one sub-cluster at a Burger King in Minnesota, and overall 11/13 (85%) case-patients with information reported consuming iceberg lettuce. FDA received and reviewed records from point-of-service investigations by MN, MO and KS for iceberg lettuce served at Burger King, Taco Bell and Sonic (respectively). No common suppliers of shredded lettuce were noted based on the preliminary traceback investigation. Because of this divergence, and based on the outbreak appearing over, FDA did not pursue further traceback. FDA/CORE will maintain a file documenting this preliminary traceability information and, if additional cases of this strain occur in the future, may initiate additional traceback investigations.

This investigation will be closed as an outbreak with a suspect vehicle of iceberg (NORS "state ID" = 2019-0134).
